

What makes your Family Doctor rock?

A year ago, I was having trouble breathing; and no energy. Went to Dr. Viger and he ran tests (chest X-ray and ultrasound). I was diagnosed congestive heart failure. Dr. Viger phoned me at home and said he was sending me to a Cardiologist. Before I could see the cardiologist, things took a turn for the worse. I went to Saskatoon City Hospital and found I had fluid around my heart, not heart failure.

Dr. Viger phoned me every couple of days to see how I was doing. Then my lung filled up after being released from hospital. Dr. Viger got me in to a Respiratory specialist immediately. Again he called me every couple of days to see how I was doing. Dr Viger is caring.
